

Setting up Relion

Robert Klein*

February 24, 2025

- Relion needs cudo-toolkit to be installed (which in turn needs a NVIDIA CUDA graphics card).
- You need conda installed, but not activated.
- commands to install (in $\${HOME}/Relion$):

```
git clone https://github.com/3dem/relion.git
cd relion
git checkout ver5.0
git pull
conda env create -f environment.yml
mkdir build
cd build
# Note the variable CMAKE_INSTALLATION_PREFIX:
cmake -DCMAKE_INSTALL_PREFIX= $\${HOME}/Relion$  ..
make
make install
```
