

Common Software

Robert Klein*

December 4, 2023

Introduction

We offer some centrally installed Software. Older packages you can find in `/sw/linux/suse/client` and `/sw/linux/suse/client/bin`, newer ones in `/sw/linux`.

Software compiled for a special Linux distribution you can find in `/sw/linux/os12.2` for openSUSE 12.2.

TeX Live 2019

- Documentation at `/sw/linux/texlive/2019/index.html`
- Prepare for use (e.g. in your `.bashrc`):

```
# use TeX Live 2019
TEXLIVE_VERSION=2019
PATH=/sw/linux/texlive/${TEXLIVE_VERSION}/bin/x86_64-linux:$PATH
MANPATH=/sw/linux/texlive/${TEXLIVE_VERSION}/texmf-dist/doc/man:$MANPATH
INFOPATH=/sw/linux/texlive/${TEXLIVE_VERSION}/texmf-dist/doc/info:$INFOPATH
export PATH MANPATH INFOPATH
```

Don't forget to log off and on again before using TeX Live 2019.

Should you need an older version of texlive, replace 2019 with 2018, 2017, 2016, 2015, 2014, or 2013 in your code.

Software for openSUSE 12.2

- Somewhere in `/sw/linux/os12.2`
- avogadro 1.10
- ppm2mpeg script (subdirectory scripts)
